ETD 10-HOUR REFRESHER

IN THIS ISSUE

OSHA ETD 10 Hour Refresher

The OSHA ETD Partnership has reviewed previous plans to do a OSHA ETD 10 Hour refresher course after 5 years.

Due to changes in the course from inception, the plan for providing refresher training has shifted to doing 1-hour quarterly training modules in approximately 15 minute increments starting in January, 2016. The Partnership will issue training topics and outlines that can be used in tailgate talks, meetings, etc. and can be delivered by the company's trainers or field supervision directly to the crews on the projects. The training can be split up into 4 occurrences or together as the contractor sees fit. The training topics and documents will initially be taken from the ETD 10 Hour program, with future training that may come from partnership data analysis, industry data, etc. Optional delivery methods are also being investigated for the future. One option may be through the Partnership App for smart phones that will be rolled out in the near future.

The 1st material for Q1, 2016 will be sent out by the end of this year.
